-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### **Status of Claims**

1. This action is in response to the application filed on 26 February 2002 and the preliminary amendment filed on 21 September 2002.
2. Claims 1-14 have been examined.

### **Specification**

3. The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code on at least pages 3 and 5. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01

### **Claim Rejections - 35 USC § 103**

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's own admissions in view of Gershman et al. (US 6,199,099 B1).

**Examiner's Note:** The Examiner has pointed out particular references contained in the prior art of record within the body of this action for the convenience of the Applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply. Applicant, in preparing the response, should consider fully the entire reference as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

**Claims 1-14:**

Applicant, in the background section of the specification discloses that PDA's, portals, channels, refreshing and downloading, synchronizing of data and applications, interrogating and selection embedded links, and SSL protocols. Applicant does not specifically disclose the use of passwords/pass phrases/ PIN numbers, and states that there is a need for encryption techniques. Gershman discloses the use of user names, passwords, and unique identifiers (see at least Figure 13 and associated text as well as other relevant passages within the reference). Gershman also discloses a hardware device separate from the PDA for encryption and decryption of sensitive data transmitted to the wireless device (see at least Figure 27b and associated text as well as other relevant passages within the reference). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the PDA infrastructure as disclosed by the Applicant with Gershman's addition of security procedures because these security techniques are already in place for personal computers such as, for example, desktop computers, laptop notebook computers, and associated computer networks. Since a PDA is merely a wireless computer with the same functionality, it would be obvious to extend these recognized and established practices to the wireless device as well.
